

On Demand Energy WITH Analysis

Your clients depend on you to advise and help execute their best energy solutions. Getting there requires evaluating their past, present and future energy data. Let RealgyAnalysis provide you with the ability to quickly and **accurately capture and pinpoint your clients' best energy opportunities along with the tools to present, execute and monitor those opportunities over the contract term**; all without software, spreadsheets, or the monthly task of collecting, interpreting and maintaining market and utility data.

“RealgyAnalysis makes it easy...one client, 18 locations, 7 LDCs... consistent reports & forecasts....now I spend my time selling rather than maintaining spreadsheets. Business has tripled.”

*Rachel Baugher
Utility Analysts*

Managing Energy Requires Mastering Data

Collecting, organizing, analyzing and distributing up-to-date energy data is a challenge to both the expert and the energy user. RealgyAnalysis enables comprehensive cost analyses on your clients' energy consumption, distribution or transmission service, and service from alternative sources. **It isn't a one-time tool** but the basis for ongoing cost controls and energy purchasing strategies.

RealgyAnalysis is a robust online database incorporating rate-ready electric and natural gas rate models and tariff analysis tools. Every month you will create actionable energy reports and utility audits by entering only the client's usage. **Building a client's profile is easy** using our exclusive Tariff Profile Wizard linked to tariff analysis. Once a profile is in place, the client's usage is entered (or electronically uploaded) for each billing period. Your client's Tariff Profile automates the routine adjustments resulting from utility riders or rate changes, market pricing and surcharges.

RealgyAnalysis is Fast and Complete

Using RealgyAnalysis you can create and post on-line **conclusive analyses and purchasing options of your clients' energy and contract data.**

RealgyAnalysis even provides you with outcome-dependent statements that quantify the results of the report. We keep track of all the moving pieces; market-based pricing variables (NYMEX, PPI, PJM, etc.), technical factors and client parameters. The reports produced are uniform and clearly identify performance goals, achievements and savings opportunities.

RealgyAnalysis keeps your clients' energy strategies and information (utility, market and account) up-to-date and on-line. Plus, you'll have a suite of tools to help you manage your accounts and execute the best energy management strategies.
